## Command Pro

## Radio Remote Control System Programmer

- Reconfigure Command Pro radio remote control systems in minutes
- Change ID codes and set-up configurations in the field
- Simplify spares management
- Portable and PC based models

## **Command Pro Programming**

Remtron's Command Pro radio remote control systems incorporate the most powerful and innovative digital and RF electronics. For your convenience, all systems can be easily programmed in the field without the necessity of hard-to-use dip switches. Both the operating frequency and the unit address are contained in a simple 6 character ID code.

Set-up information for each application is stored in the microprocessor memory and is accessible via a programming jack on the circuit board. Remtron offers two styles of programmers for the convenient field maintenance of your systems.

Spares management has never been easier! Complete set-up information including frequency and address can be programmed in minutes.

**RAC16 Handheld Programmer -** Completely portable and small enough to fit in your tool pouch. The RAC16 quickly changes ID codes and some simple set-up parameters. It also transfers complete set-up information from a fixed computer site to a receiver. For most applications this is the only programmer needed.

**RAC17 PC-based Programmer -** Operating under the Windows® environment, the RAC17 provides large facilities and dealers a convenient method to maintain set-up information on systems under their control. Each file contains the equipment type, ID code and set-up parameters. If a spare transmitter or receiver is needed, the file for that particular equipment can be opened and the information simply downloaded into a spare receiver or transmitter.
