

Asset Monitoring For Critical Events

Cattron™ Application Note

COMPANY

Municipalities and private industry that have larger pumping stations, water and/or wastewater plants.

CHALLENGE

Monitoring of tank level, pressure, pump status, chlorine residuals, UV levels, clarifiers and mixers, discharge pressure and generator status.

SOLUTION

The EliteIQ™ monitoring system that is typically installed at larger pump stations as well as water and/or wastewater plants either as a standalone hardware solution for remote monitoring of critical events or as a backup to SCADA HMI system. Visibility into the RemotelQ™ website allows operators and management the ability to access site status and perform control functions from any location. The EliteIQ is a robust system that monitors a significant number of data points and is designed to withstand environmental challenges such as temperature, moisture and gases commonly found in station and plant applications.
