

Remote Control of Concrete Pumping

Cattron™ Application Note

COMPANY

Companies that provide concrete pumping and shotcrete services

CHALLENGE

Controlling the flow of material and quickly shutting down the concrete pump if a blockage occurs from the discharge end of the hose

SOLUTION

A Remtron™ brand Pump Boss II™ wireless remote control system is installed on the concrete pump. This gives the operator a handheld remote control that enables direct and immediate control of the pump from the point of delivery. The watertight case keeps the controller safe from the elements commonly found on the jobsite.
