

Cattron™ Demonstrates its Wireless Connectivity and Control Solutions at Rockwell Automation Fair on November 20 & 21.

Booth 272

Along with a fresh new look launched in 2019, Cattron™ is offering an expanded view of its wireless connectivity and control solutions portfolio at this year's Rockwell Automation Fair. The booth features highly interactive, hands-on demonstrations of its mission-critical safety and productivity solutions. Stop by **Booth 272** to see how you can win with Cattron!

The following solutions for industrial automation applications will be on display.

Safe-E-Stop™ is a personal and machine safety device that provides access to a wireless emergency stop, adding another layer of security to hard-wired Estop systems. Experience the ability to stop anything, anytime, anywhere by using Cattron's Safe-E-Stop system to command the stop of a spinning prize wheel.

CattronControl™ is a global platform of wireless, ergonomically designed, remote control solutions for industrial and material handling applications all over the world. Using a CattronControl LRC-M1 controller, attendees can control the movements of a claw machine game, simulating real world environments, to capture and claim their prize. You'll find that when you choose CattronControl, you are always a winner.

Remtron™ is a high-quality, extremely durable series of pushbutton controllers available to customers in North America. See how easy it is to use a Remtron controller with an exciting coin game that will remind you of when you were a kid. In addition, you will get a sneak peek at the new face of Remtron, launching in 2020.
