

# AQUAVX™ IS FIRSTNET COMPATIBLE

## RELIABLE SCADA MONITORING SOLUTIONS

Cattron's Aquavx™ Pro and ProPlus remote monitoring devices are now FirstNet compatible\*. Operated by AT&T, FirstNet is a nationwide wireless communication network that provides prioritized, reliable and secure communication services to public safety personnel during emergencies, disasters and daily operations. It offers features such as network priority, preemption and resilient infrastructure to ensure first responders can maintain communication when it matters most.

### KEY BENEFITS

#### PRIORITY ACCESS

FirstNet users have priority access to the network. This means that during high-traffic situations, Aquavx will receive first-in-line network access to ensure mission-critical communication goes through.

#### EXTENDED COVERAGE

FirstNet's dedicated spectrum (Band 14) and extensive infrastructure, including mobile satellite cell sites and deployable units, provide broader coverage for Aquavx users, especially in remote or rural areas where commercial networks may not reach.

#### ENHANCED SECURITY

FirstNet provides encrypted communications to protect sensitive data and ensure information integrity and public safety.

**FIRSTNET COMPATIBLE**

*\*Optional build is required for FirstNet compatibility*

**Aquavx Pro / ProPlus**
